

Get IN the Picture!

Calling Students, Educators, Schools, Education Providers...

Join us in making history by creating a landmark that will be captured in the
Indiana 2025-2027 Aerial Photography!

Why Participate?

- Create Something Unique
- Represent Your Community
- Showcase Your Creativity
- Learn and Have Fun

Is your organization
located in this
central zone?
If so:

We invite you to Get
IN the Picture in 2025!

How to Get Involved:

1. **Check the Map Above to See if Your County will be Flown in 2025:** Flights begin **February 14, 2025!**
2. **Plan Your Design**
 - a. **Brainstorm Ideas:** Think of something that represents your community, school spirit, or fun theme.
 - b. **Size and Scale:** Your artwork must be large enough to be seen clearly in the aerial imagery. Use tools like measuring tapes and grid paper to plan your design.
 - c. **Resolution Awareness:** Learn how pixel resolution affects visibility in aerial images.
3. **Create Your Landmark**
 - a. **Surface Preparation:** Choose a suitable outdoor surface such as grass, parking lots, or tennis courts.
 - b. **Grid It Out:** Transfer your design to the surface using grid techniques.
 - c. **Use the Right Materials:** Plan for materials like paint, brushes, and weather-resistant supplies.
 - d. **Build and Construct:** Use materials from home or school to bring your design to life.
 - e. **Finish on Time:** Check the flight schedule for your area and ensure your design is ready!
4. **Capture the Moment:** Your landmark will be photographed from a bird's eye view and become part of an official aerial image!

Educational Opportunities:

- **Art Meets Technology:** Learn about pixel resolution, scale and the science of aerial photography (or ortho-imagery). The higher the resolution, the more details your artwork can be captured in the imagery, showcasing the artwork to its fullest!
- **Planning with Precision:** Measure and scale with tools like grid paper to ensure your design fits the outdoor space.
- **Color and Composition:** Learn about color theory and how to make your design pop from above ... a bird's eye view. Consider how letters or small details will appear in the imagery.
